(Kind attention : Sr.DMEs, all Divisional Railways)

Sub: Proposal for fitment of Upgraded Safe Load Indicator (SLI) in
140T Crane (Gottwald Design) under your Jurisdiction.

In connection to the subject above, initially Jamalpur Workshop had manufactured 140T cranes equipped with Safe Load Indicators (SLIs) of an older model, we are now upgrading these cranes with a modernized and advanced version of the SLI. This upgraded SLI is being incorporated in new manufactured and those cranes which are presently under Periodic Overhauling (POH) at Jamalpur workshop.

In this regard, we would like to inform to all zonal railways to consider upgraded SLIs in 140T cranes. The new SLI offers enhanced safety features, improved accuracy, and better compatibility with modern operational requirements & ensuring greater reliability during crane operations. In this regard it is requested to send Division's demand for fitment of upgraded SLIs in 140T cranes.

As per Division's requirement Jamalpur Workshop will make a plan for fitment of Upgraded SLI at consignee location through works contract. Early response from division will help us for quick planning.

Earliest response in this regard is solicited.
